

1. Suppose your training examples are sentences (sequences of words). Which of the following refers to the  $j^{th}$  word in the  $i^{th}$  training example?

1 point

- ☒  $x^{(i)<j>}$   
☐  $x^{<i><j>}$   
☐  $x^{(j)<i>}$   
☐  $x^{<j><i>}$

2. Consider this RNN:

1 point

True/False: This specific type of architecture is appropriate when  $T_x = T_y$

- ☒ True  
☐ False

3. To which of these tasks would you apply a many-to-one RNN architecture? (Check all that apply).

1 point

- ☐ Speech recognition (input an audio clip and output a transcript)  
☒ Sentiment classification (input a piece of text and output a 0/1 to denote positive or negative sentiment)  
☐ Image classification (input an image and output a label)  
☒ Gender recognition from speech (input an audio clip and output a label indicating the speaker's gender)

4. Using this as the training model below, answer the following:

1 point

True/False: At the  $t^{th}$  time step the RNN is estimating  $P(y^{<t>} | y^{<1>}, y^{<2>}, \dots, y^{<t-1>})$

- ☐ False  
☒ True

5. You have finished training a language model RNN and are using it to sample random sentences, as follows:

1 point

True/False: In this sample sentence, step  $t$  uses the probabilities output by the RNN to pick the highest probability word for that time-step. Then it passes the ground-truth word from the training set to the next time-step.

- ☐ True  
☐ False

☒ False

6. You are training an RNN model, and find that your weights and activations are all taking on the value of NaN ("Not a Number"). Which of these is the most likely cause of this problem? 1 point
- ☐ Vanishing gradient problem.
  - ☒ Exploding gradient problem.
  - ☐ The model used the ReLU activation function to compute  $g(z)$ , where  $z$  is too large.
  - ☐ The model used the Sigmoid activation function to compute  $g(z)$ , where  $z$  is too large.

7. Suppose you are training an LSTM. You have a 10000 word vocabulary, and are using an LSTM with 100-dimensional activations  $a^{<t>}$ . What is the dimension of  $\Gamma_u$  at each time step? 1 point
- ☐ 1
  - ☒ 100
  - ☐ 300
  - ☐ 10000

8. True/False: In order to simplify the GRU without vanishing gradient problems even when training on very long sequences you should always remove the  $\Gamma_u$ , i.e., setting  $\Gamma_u = 0$ . 1 point
- ☐ True
  - ☒ False

9. True/False: Using the equations for the GRU and LSTM below the Update Gate and Forget Gate in the LSTM play a different role to  $\Gamma_u$  and  $1 - \Gamma_u$ . 1 point

#### GRU

$$\tilde{c}^{<t>} = \tanh(W_c[\Gamma_r * c^{<t-1>}, x^{<t>}] + b_c)$$

$$\Gamma_u = \sigma(W_u[c^{<t-1>}, x^{<t>}] + b_u)$$

$$\Gamma_r = \sigma(W_r[c^{<t-1>}, x^{<t>}] + b_r)$$

$$c^{<t>} = \Gamma_u * \tilde{c}^{<t>} + (1 - \Gamma_u) * c^{<t-1>}$$

$$a^{<t>} = c^{<t>}$$

#### LSTM

$$\tilde{c}^{<t>} = \tanh(W_c[a^{<t-1>}, x^{<t>}] + b_c)$$

$$\Gamma_u = \sigma(W_u[a^{<t-1>}, x^{<t>}] + b_u)$$

$$\Gamma_f = \sigma(W_f[a^{<t-1>}, x^{<t>}] + b_f)$$

$$\Gamma_o = \sigma(W_o[a^{<t-1>}, x^{<t>}] + b_o)$$

$$c^{<t>} = \Gamma_u * \tilde{c}^{<t>} + \Gamma_f * c^{<t-1>}$$

$$a^{<t>} = \Gamma_o * \tanh c^{<t>}$$

☐ False

☒ True

10. You have a pet dog whose mood is heavily dependent on the current and past few days' weather. You've collected data for the past 365 days on the weather, which you represent as a sequence as  $x^{<1>}, \dots, x^{<365>}$ . You've also collected data on your dog's mood, which you represent as  $y^{<1>}, \dots, y^{<365>}$ . You'd like to build a model to map from  $x \rightarrow y$ . Should you use a Unidirectional RNN or Bidirectional RNN for this problem? 1 point
- ☐ Bidirectional RNN, because this allows the prediction of mood on day  $t$  to take into account more information.
  - ☐ Bidirectional RNN, because this allows backpropagation to compute more accurate gradients.
  - ☒ Unidirectional RNN, because the value of  $y^{<t>}$  depends only on  $x^{<1>}, \dots, x^{<t>}$ , but not on  $x^{<t+1>}, \dots, x^{<365>}$ .
  - ☐ Unidirectional RNN, because the value of  $y^{<t>}$  depends only on  $x^{<t>}$ , and not other days' weather.
